

Sustainability in Logistics

Landmark Global's Commitment To Progress

At Landmark, sustainability is not just a goal – it's an ongoing journey.

As part of the bpostgroup, we are committed to the collective ambition of achieving Net Zero by 2040. While there is still progress to be made, we are taking significant steps to ensure our operations are more environmentally and socially responsible.

Building a Strong Foundation

Every year, we participate in the group's Environmental, Social and Governance (ESG) data collection initiative. This process helps us measure and understand our environmental impact, from carbon emissions to waste production. These insights guide our investments, refine our practices, and ensure we are prioritizing areas where we can make the greatest difference.

Key actions include:

Recycled materials
Many of our packaging materials, such as cardboard, are made from recycled sources.

Waste tracking
We monitor how much waste is recycled to identify opportunities for improvement.

Energy efficiency
Our facilities use LED lighting, energy-saving systems, and electric forklifts to reduce energy consumption.

Adapting to Customer Expectations

Sustainability is increasingly a priority for our customers, it plays an essential role in their decision-making. Tenders now commonly include questions about green initiatives, challenging us to innovate.

Whether it is operating a plastic-free supply chain or replacing traditional packaging with paper-based, recyclable materials, we are always looking for ways to adapt our processes to best support client's goals and reduce our environmental impact - a win for all.

Greener Facilities

Over the past five years, all Landmark Global facilities have been rebuilt with sustainability in mind. These third-generation facilities are designed to reduce energy consumption and improve efficiency while creating a better working environment for employees.

Features include:

 **LED lighting systems** that activate only when movement is detected.

 **EV charging stations** in parking areas to support sustainable commuting.

 **Proximity to public transportation** to encourage carpooling and reduce emissions.

Looking Ahead

Landmark is committed to accelerating our sustainability efforts in the coming years.

Key focus areas include:

 **Renewable energy**
Expand our use of renewable energy sources to power facilities.

 **Sustainable commuting**
Promote carpooling, public transport, and remote work to reduce commuting emissions.

 **Smarter operations**
Continue to innovate within our supply chain to minimize waste and improve efficiency.

Icons to Highlight Key Points:

- **Net Zero 2040 Commitment:**
A clear path toward bpostgroup's sustainability goals
- **Recycled & Renewable Materials:**
Using recycled cardboard and renewable energy where possible.
- **Energy-Efficient Facilities:**
LED lighting, EV charging stations, and optimized energy use.
- **Customer-Centric Innovation:**
Tailoring sustainable solutions to meet client demands.
- **Transport Challenges:**
Tackling the largest area of impact with electrification and partner collaboration.

By taking these steps, Landmark Global is confident we are moving in the right direction—delivering not just packages, but a commitment to a more sustainable future.

Open your world to fast, hassle-free shipping solutions that meet your ambitions.
